

Patent Application of Bruce W. Booker for

“Whistling Punching Bag” continued

Page 13

CLAIMS

1. A whistling punching bag, comprising:

- (a) a punching bag,
- (b) a compressible pneumatic target mounted partially inside the surface of said punching bag and partially outside the surface of said punching bag, and
- (c) a whistle, and
- (d) means by which said whistle sounds when said compressible pneumatic target is struck by the user.

2. The whistling punching bag of Claim 1 wherein said compressible pneumatic target is in the shape of a hemisphere outside the surface of said punching bag and in the shape of a hemisphere inside the surface of said punching bag with a narrower section transfixing the surface of said punching bag.

3. The whistling punching bag of Claim 1 wherein said compressible pneumatic target is connected to said whistle by a pneumatic hose.

4. A whistling punching bag comprising:

- (a) a punching bag,
- (b) a compressible pneumatic target, attached to said punching bag, and
